

MODULES

accessing the main module

addenda: package manager tips

addenda: the .mjs extension

all together...

caching

module caching caveats

core modules

cycles

file modules

folders as modules

loading from node-modules folders

loading from the global folders

the module wrapper

the module scope

--dirname

--filename

exports

module

require(id)

require.cache

• main

• resolve

• paths

the module object

module.children

• exports

exp

exports shortcut

module.`filename`

- `id`
- `loaded`
- `parent`
- `paths`
- `require (id)`

the Module object

module.`builtin Modules`

- `createRequire`
- `syncBuiltinESMExports`

Source map v3 support

module.`findSourceMap`

class: module.`SourceMap`

me `SourceMap`

`SourceMap`.`payload`

- `findEntry`
